

US01 – GoT graph on Gephi

The graph represents the links between the characters in the Game of Thrones' books. More a character has links with the others more his node is big, as we can see "Jaime Lannister" and "Robert Baratheon" are two of the most linked characters. Then we notice the characters' nodes have many different colors, one color represents a group of people which are very close to each other, for example, the blue represents the crew of "Daenerys Targaryen" with the Dothraki, his ancestors, etc. The main problem of this graph is that is very difficult to see the less linked characters.

If we want to visualize the main characters of each family, we can remove the characters which have less than 200 links. It remains characters that everybody knows.
